

COPPER CREEK CO. REORGANIZED

New Management Takes Charge of Property and Begins Development.

Tucson, Ariz., Jan. 22.—A reorganization of the Calumet & Copper Creek Mining company has been effected, it is announced, by which Col. Frank J. Sibley, who was president, and R. Ray Sibley, general manager, have severed their connection. The new company is to be known as the Copper Creek Mining company, and will be under the management of W. C. Steadman, formerly of the Helvetia Copper company. Steadman is now working 30 men at the property, which lies in the Copper Creek basin on the western slope of the Gila mountains, 21 miles south of Winkelman.

Development at Bush-Baxter Group.
The American Smelting & Refining company is doing development work on the Bush-Baxter property in the Twin Butte district and is sinking a shaft on the Three Nations group adjoining. Fourteen cars of ore are being shipped weekly from the mine, the chief of the Bush-Baxter claims.

E. C. Bush has unwavering the Glance mine, and has begun drilling at the bottom of the shaft. He is already shipping some of the higher grade ore. A. W. Baxter, of Tucson, and Charles P. Pfister and James Rickerson, of Milwaukee, are associated with Mr. Bush in this enterprise.

The Atlas group at Silverbell is shipping 60 tons of ore a day. It is said that as soon as better transportation facilities are available on the Arizona Southern Railway, the Atlas will ship 100 tons a day.

The Mineral Hill mine, under the management of E. M. Ray, is shipping from 75 to 100 tons of ore daily. Ninety men are now employed at the property and the force is to be increased. Mr. Ray is operating the mine under lease from E. N. Barnesdale, of Phoenix, the controlling owner. He is Mr. Barnesdale's engineer.

Arthur Cragin and Alex Rossi have eight carloads of ore at the Silverbell mine ready for shipment.

ARIZONA MINE INSPECTOR TO LOOK INTO JOPLIN MINE

Phoenix, Ariz., Jan. 22.—For the purpose of inspecting the American Smelting & Refining company's big zinc mine at Joplin, Mo., state mine inspector G. H. Bolla will leave for that place next week. The company is reluctant to carry out certain requirements inspector Bolla has laid down for the operation of the Christmas mine. It contends that the same methods employed at Christmas are in safe and successful use at Joplin, so the inspector has decided to see the Missouri property for himself.

Chinese Premier May Not Serve Under Monarchy; Premier of Tsing Dynasty

Peking, China, Jan. 22.—Chinese officials are speculating as to the probable composition of the cabinet under the monarchy. It is generally believed that the present premier, He Shih-chang, will refuse to continue as premier under the monarchy. This is because he served under the Tsing dynasty, and cannot well explain to the Chinese public how it is possible to serve another master. Furthermore, Yuan Shikai was subordinate to him under the Tsing, the revision of their position would be almost unthinkable to the Chinese. It is rumored that He Shih-chang may consent to become premier some time later, but does not feel that he can assume that position at the very beginning of the dynasty.

If Shih-chang refuses the premiership, Li Chang-hung, the present minister of foreign affairs, will doubtless become the premier. It is suggested that Liang Shih-chi will become the vice-premier.

Other probable members of the monarchial cabinet are:
Minister of Interior: Chu Chi-chien; the minister of army: Gao Wang Shih-chin and admiral Lin Kuang-hung; the minister of navy: Chang Tsen-hung; the minister of justice: Chang Tsen-hung; the minister of communications: Yang Shih-chi or Sheng Yuan-ping; the minister of education: Yang Tsu or Sun Yu-ping; the minister of agriculture and commerce: Chow Tzu-chi; and the minister of imperial household: Yang Na-hua.

SHIP MACHINERY TO AJO CLAIMS

Construction Work at Big Camp is About to Start; Many Outside Claims.

Cornelia, Ariz., Jan. 22.—Construction work on the reduction plant of the New Cornelia Copper company, subsidiary of the Calumet & Arizona Mining company, is about to start, following the completion of the Tucson, Gila Bend and Ajo railroad. Ten carloads of machinery and equipment, now on the way, are expected to reach here in the first train. It is estimated that between 200 and 400 mechanics and from 500 to 1200 laborers will be employed during the construction period which will extend over about a year.

Now will come the real work—getting out the copper, of which there are said to be many millions of tons of low-grade, susceptible to mining by the steam shovel process. One may walk for miles and see evidences of copper on every hand, stains, outcroppings and striations all pointing to ore underneath. Gold, wolframite and tungsten have also been found in the surrounding country.

New Claims Staked.
New claims are being staked daily from two to three miles of Old Ajo. And the same distance from the lines of the big company's property south of this ground is still open. South and east, the Cornelia country is receiving some attention just now. It is probable that operations will be started shortly.

Grover District Looks Up.
The Grover district is showing some activity also. Henry C. Dickson, of Memphis, Tenn., who is interested in the Monahock and Chumron groups, has just returned from an inspection of their properties. He is very optimistic as to the future of this camp and adjacent country.

Inspects Mine Find Body.
Dr. Lorenzo Boido, of Phoenix, has been looking over the district for some days. It is reported that he has brought the Papago mine. While in that vicinity, Dr. Boido found the body of Dave O'Neal, who had died on the trail, probably from exposure during the late severe storm. He was alone, and lay on the side of the trail. O'Neal was an old time prospector.

Town is Building.

The town of Ajo has three general stores, two restaurants, a well equipped meat market with cold storage and live plant connected, a pool hall, news stand, two small lodging houses, an excellent boarding house, two barber shops, a tailor shop, jeweler, two shoe repair shops and a blacksmith shop.

The Ajo Brick company, now operating, is turning out thousands of brick daily.

OLD DOMINION YIELDS 100 TONS OF ORE DAILY

Globe, Ariz., Jan. 22.—The Old Dominion mine is now producing ore at the rate of about 100 tons of ore a day. Most of this ore is coming from the 12th, 14th and 15th levels on the east side of the mine, and from the 12th, 14th and 15th levels on the west side.

Considerable development work is being done on the 17th and 18th levels from the west mine and the results are declared to be encouraging.

On the 18th level at the "A" shaft, preparations are being made to sink the shaft at the bottom of the shaft so as to get sufficient room to lower the three-deck cage to that level. The flow of water on the 18th level has decreased somewhat and one of the big 2400-gallon Aldrich pumps is now able to take care of the flow. Satisfactory development and ore extraction is proceeding at the Greymine. Outside exploration is also proceeding at the Big Johnny mine of the United Globe and on the Darius claim of the Old Dominion.

MOVIE OF A MAN TELEPHONING - - BY BRIGGS

HEADS AMERICAN DEFENCE SOCIETY

Members of the American Defence society are congratulating themselves upon the election of Dr. David Jayne Hill, former U. S. ambassador to Germany, as president of the advisory board of the organization. Ex-president Theodore Roosevelt nominated Dr. Hill at the election meeting held by the advisory board. Dr. Hill expects to work out a definite program for the society to follow within the next few weeks.

JAECKLE COMMANDS COL. GRUBBS CAMP

Col. Hayden Y. Grubbs camp, United Spanish War Veterans, will be commanded by William Jaekle, during the coming year. He has been elected commander of the Grubbs camp, which is composed of the 16th infantry members, and he will be installed this evening at the meeting to be held in the Ryan dancing academy. The other elective and appointive officers will also be installed.

At this meeting the reports of committees will be made and refreshments will be served. Sgt. Maj. Walter Ulrich will be the installing officer. He is the retiring camp commander and one of the organizers of Col. Grubbs camp. The complete list of officers to be installed is as follows:
Commander, William Jaekle.
Senior vice commander, Charles C. Smith.
Junior vice commander, August Torstrop.
Officer of the day, Frederick Bearmont.
Officer of the guard, Archie Bell.
Trustees, Edward Richards, Peter Moran, Pearl F. Price.
Adjutant, Walter Ulrich.
Quartermaster, Benjamin I. Berry.
Historian, Albert Clark.
Burgmaster, Dennis Beakles.
Quartermaster sergeant, Peter Barik.
Color sergeant, John C. Reed, Albert D. Jones.
Chief musician, James E. Caldwell.
Principal musician, Edward Ford.
Sick committee, The Chaplain, Torstrop and Reardon.
Refreshment committee, Torstrop, Booth, Fedorov.
Social committee, Smith, C. C. Moran, Barth, Standish.
Walter Ulrich, installing officer.

Care of the Baby In Winter

Fresh Air Is One of the Most Important Things; as Much Care Is Necessary for Babies in Winter as in Summer; Watch for the Colds.

First of a series of six articles prepared by the Children's Bureau, U. S. Department of Labor.

SO MUCH emphasis is constantly placed upon the necessity for special care of the baby in summer, when the heat is excessive and diarrheal diseases at their worst, that the fact that winter, too, has its special dangers for the baby is sometimes overlooked.

But the combination of heat and diarrhea is hardly more serious for the baby in the months of July and August, than are cold and respiratory diseases in winter.

It is plain then, that the winter care of the baby deserves special attention from everyone interested in his health and well-being.

It has been demonstrated quite conclusively that a large part of the deaths from summer diarrhea are needless, because this disease may be cured in many cases, and prevented entirely in many more, by the proper care and feeding of the baby during the heated months. The same doctrine is now being applied to the group of what are commonly called "winter diseases" of babies and children, namely, bronchitis, pneumonia, "colds" and like, which are like diarrhea, to a large extent, preventable by the intelligent care of the baby, and by surrounding him with proper living conditions.

Winter Precautions.

These proper living conditions consist both in winter and summer of suitable food, in the right amounts, at the right times, cleanliness, and sufficient sleep, plenty of fresh, clean air to breathe, and protection from exposure to infectious diseases. It is chiefly the lack of these latter requirements that causes the winter illnesses among babies.

It is not the cold of winter which makes people sick, ordinarily, but rather the stale over-heated air inside our houses and public buildings, which we breathe and re-breathe, thus passing disease germs about from one to another. Babies are particularly liable to be infected in this way, because they spend a large part of their time indoors, and because mothers are apt to feel that to keep the baby warm the rooms must be kept shut tight.

Protect Child from Cold.
A mother should use every means in her power to protect her baby from "taking cold," as it is commonly described. "Colds" are due to a germ and are very contagious, being easily passed from one person to another in coughing or sneezing. A nursing mother with a cold should tie a thin cloth or veil over her mouth and nose while nursing the baby, and should be careful never to cough or sneeze in his face, nor kiss him in the mouth. She should be particularly careful not to use her own handkerchief for the baby, nor sleep with him, while the disease lasts. Many babies contract these colds by being taken up and kissed by visitors, and it is a wise rule to keep the baby away from the presence of people who are coughing and sneezing. The reason for this great care as regards a baby is that a contagious cold is very often the forerunner of bronchitis and pneumonia, which diseases cause the deaths of many thousands of young babies every year, and which are infinitely easier to prevent than to cure.

Fresh Air Is a Panacea.
Fresh air is the most effective weapon with which to fight the diseases of the respiratory tract. This does not necessarily mean cold air, for cold air may be stale, and warm air may be pure. The ventilation of most American houses is faulty, since in order to keep them warm enough to suit us we shut them so tightly as to make the air unfit to breathe, after a few hours. To counteract this tendency mothers should see to it that all the occupied rooms of the house are thoroughly aired at least twice every day in the coldest weather, while in moderate weather there should be as nearly constant a supply of fresh air throughout the house, night and day, as can be managed.

When the temperature outside is very low, the baby should be taken into a warm room while his nursery is being aired, and at night, his bed should be shielded from a direct draft. If there is a communicating room, the window in that room may be opened, if there is danger of chilling the air of his sleeping room.

Always Give Baby Air.

If the cold is excessive, or if there is a raw, damp wind blowing or rain or snow is falling, the baby should be given his daily airing in a room with the windows open, or on a protected porch, dressing him warmly in out of door clothing. He should be taken out during the middle of the day, for a little while, never long enough to run the risk of chilling him. This applies especially to young and delicate babies. As a child gets old enough to walk about and thus exercise himself, he can be allowed to play for some time in an open room or where he is sheltered from the wind.

But an airing every day does not take the place of fresh air in the house, day and night, and to secure sufficient ventilation for health the mother must be on the watch to see that the rooms are opened and the air changed at frequent intervals.

our houses and public buildings, which we breathe and re-breathe, thus passing disease germs about from one to another. Babies are particularly liable to be infected in this way, because they spend a large part of their time indoors, and because mothers are apt to feel that to keep the baby warm the rooms must be kept shut tight.

Many Prospectors Coming to Carlsbad Country

Carlsbad, N. M., Jan. 22.—The second party of prospectors to be brought into the valley since immigration agent C. F. Ladd has been employed, will arrive next week and will be shown the irrigated districts. The first crowd looked over the valley and announced that a 300-acre tract would be purchased soon.

The Carlsbad Water Users' association has re-elected its officers and is now preparing to bring many settlers into the valley. The new board was organized as soon as the election was held with James E. Wallace as president; William E. Rose, vice president; Scott Etter, secretary and treasurer. The directors are John A. Hartshorn, Henry Tipton, William E. Rose, Charles Pardue and James Little.
